1. COMMON DESCRIPTION AND THE STRUCTURE OF FACULTY

Technical protection of information is the activity aimed at preventing violations of integrity, blocking and (or) leakage of information through technical channels.

In a market economy and accelerated development of high technologies, there is growing the demand for generalists, able for quickly change the nature of the professional activity, to reevaluate the experience, analyze the

own opportunities, acquire new knowledge, using modern information technologies. **Institute of Physics and Technology (IPT)** trains specialists who provide technological independence and information security of Ukraine.

During the training in Institute, students are educated at the level of the best universities in the world, as evidenced by the numerous victories in the international student's competitions in London, Budapest, Tehran, Prague, Warsaw, Bucharest, Munich.

Students of IPT have won more than 50 awards at international competitions in mathematics and programming (London, Los Angeles, Moscow, Munich, Tehran, Tokyo and others.) Among the awards there are 6 Gran Prix at the International Mathematics Competition for University Students – the most prestigious student International Mathematical Olympiad), and about 200 awards in national student competitions.

Structure

The IPT consists of:

- 5 departments;
- complex of training laboratories of physics;
- training laboratories of computer technologies;
- Center for retraining and advanced training in the information security;
- Special Design Office "Storm";
- Research Center "Acoustics";
- Research Laboratory for Methods of Optical Information Recording;
- Research Laboratory of Security of Information Communication Systems

1. Department of Applied Physics trains experts in specialty "Applied Physics and Nanomaterials" (specialization "Applied Physics").

Specialists obtain fundamental knowledge in higher mathematics, physics, and modern informatics according to the programs of classical universities, modern science. In training subject "High Physical Technologies" the Department provides professional skills to solve the scientific problems in nanotechnology (synthesis of high-

temperature superconductors, fullerenes, carbon nanotube composites, quasicrystals), nanomaterials (materials with unique properties), the physical fundamentals of information technology (data registration, processing, and storage). The curriculum of training subject "Physics of Living Systems" devoted to the study of the fundamental laws of self-organization and functioning of living systems; solving problems of artificial intelligence; integration of biological and non-biological systems for the creation of intelligent microsystems for medical diagnostics.

2. Department of Physics of Energy Systems prepares experts in specialty 105 "Applied Physics and Nanomaterials", specializing in "Applied Physics."

Students gain fundamental knowledge of general and theoretical physics, higher mathematics, methods of mathematical modeling of physical processes, computer programming, English. Professional knowledge allows them to solve fundamental and applied problems in the physics of the modern sources of energy, to implement new energy-saving technologies, to develop modern alternative energy sources and increase the efficiency of the traditional sources.

3. Department of Information Security trains highly qualified specialists in specialty "Applied Mathematics" (specialization "Mathematical Modeling, Pattern Recognition and Data Security") and "Cybernetic Security" (specialization "Systems, Technologies, and "Mathematical Methods of Cybernetic Security").

The department provides fundamental and professionally oriented training of students IPT in higher mathematics, computer science, information security.

Fundamental training of applied mathematician is achieved by mastering of the classical branches of mathematics as a mathematical and discrete analysis, mathematical logic and theory of algorithms, differential equations, the theory of functions of complex variables, functional analysis, probability theory, stochastic processes and mathematical statistics. Students are provided with a wide range of subjects related to computer technology and programming. Considerable attention is paid to the use of supercomputers and supercomputer technologies in modeling, distributed and cloud computing. The training program in training subject "Mathematical Methods of Computer Modeling" is dedicated to the development and application of models and methods of applied mathematics to solve complex systems modeling problems, Big Data analytics and machine learning, management of

knowledge and innovation, support for decision-making in the promising areas of the modern economy.

Cybernetic security experts study modern technology of information protection in cyberspace, master the principles of software protection from the action of malware, familiar with the process of creation of information security systems and information security management; acquire knowledge for a wide range of tasks in the field of cyber security – from the development and application of software and software and hardware protection of information in information and communications systems to investigate crimes in cyberspace. According to the program of training subject "Mathematical Methods of Cybernetic Security" students acquire the development and application of intelligent information processing methods for determining the state of security of the society, economy, and ecology; research dissemination of information in cyberspace; modeling of information flows, identifying, interpreting and responding to critical information flows (abnormal behavior, dangerous social processes); nonlinear modeling of people's behavior and communications.

4. Department of Mathematical Methods of Information Protection trains

experts with a degree in "Applied Mathematics" (specialization "Mathematical Methods of Cryptographic Protection of Information").

The department prepares professionals capable of solving the most complex information security problems in the information and communication systems, which deal with discrete and algebraic transformations of information,

including to solve problems in mathematical cryptography and security problems of cryptanalysis; design, develop and meet the challenges of information protection means and cryptosystems maintenance; design, conduct development and maintenance of software systems for special purposes; conduct studies on special subjects of mathematics, information protection and cryptology in the information and communication systems.

Thorough knowledge of higher mathematics at the level of classical universities, information technology, as well as foreign language allows studying algebra, combinatorial analysis, and analysis of algorithms, information theory, and coding, cryptology at the level of world standards.

The **Department of Physical and Technical Methods of Information Protection** provides the fundamental and professionally oriented training of students in the IPT in the field of general physics, acoustics, electronics, radio, as well as specialized training in systems of technical protection of information. Education provided by the department is based on the principles of physical and technical education system.

The main task of the department is the training of highly qualified specialists in specialty "Cybernetic Security" (specialization "Systems of Technical Protection of Information") on demand of the leading organizations in the development and use of means of physical and technical protection of information.

2. EDUCATIONAL PROGRAMS

Levels of higher education. Training of students at the IPT is carried out at several levels of higher education. The first (Bachelor's course, I – IV academic years) – the students acquire fundamental knowledge in physics, mathematics, mechanics, computer engineering, and special disciplines.

During the IV year, they defend bachelor's thesis and obtain qualification degree Bachelor. At the second level (Master's course, V – VI academic years) training is carried out according to the Master program. Students are trained and acquire relevant skills including laboratory practice. Additionally, students have the opportunity to continue their education in a Graduate course, and then in a Doctoral candidacy of the University.

Terms of specialists training: Bachelor (b) – 4 years; Master (m) – 2 years (standard terms of training at Bachelor's course and Master's course), Graduate course / Doctoral candidacy – 3 years (4 years by the correspondence study).

Training of specialists is carried out on the full-time and correspondence forms of education.

Specializations of training:

Applied Physics and Nanomaterials

- Applied Physics

Applied Mathematics

- Mathematical Methods of Cryptographic Protection of Information
- Mathematical Modeling, Pattern Recognition and Data Security

Cybernetic Security

- Systems and Technologies of Cybernetic Security
- Mathematical Methods of Cybernetic Security
- Systems of Technical Protection of Information

IPT trains specialists on modern subdisciplines of applied mathematics, physics, computer science and information security. According to numerous reviews of employers, IPT fulfills its purpose: training of elite-level specialists for science and high-tech sectors of the Ukrainian economy. Graduates have defended more than 50 dissertations (every sixth graduate of master's degree) in mathematics, physics, computer science in Ukraine, Europe, USA, and Canada.

Graduates of Institute are working in institutions of National Academy of Sciences of Ukraine, state authorities of Ukraine, institutions and companies of the state and non-state forms of ownership, where the basic requirements for employees are high intelligence, deep knowledge, ability to work in a highly intellectual competition.

Most graduates are working in Ukraine and occupy the positions of leading specialists – scientists, analysts, experts, and developers.

3. TRAINING AND LABORATORY BASE

IPT consists of 5 departments, Training Center, 2 educational laboratories and 3 research divisions.

Universitywide premises and classrooms of IPT are used for training sessions.

Students can use the Igor Sikorsky KPI library services. Physical education classes are held in the sports complex. Students are provided with a hostel.

4. RESEARCH ACTIVITY

Institute of Physics and Technology actively collaborates with institutes of the National Academy of Sciences of Ukraine, the Department of Informatization of the National Bank of Ukraine, the Department of Special Telecommunication Systems and Information Protection of Security Services of Ukraine, representative offices of Microsoft, Nortel Networks, Sun Microsystems in Ukraine and a number of institutions and companies of state and private forms of property.

The main directions of scientific work of the departments:

Department of Applied Physics

- development of cooled IR matrix converters, nanostructures of multi-element hybrid pyroelectric detectors;
- research in the field of scientific instrument making, optoelectronic devices based on new semiconductor materials;
- physical research in human biophysics and physiology.

Department of Physics of Energy Systems

- thermal and gas-dynamic processes in complex swirling flows;
- film cooling of gas turbine blades;
- thermogasdynamics of heat transfer surfaces with the hollows on the surface;
- new thermodynamic cycles of power plants;
- development and research of functional materials by non-traditional methods.

Фізико-технічний
інститут

Department of Information Security

- mathematical methods of analysis and synthesis of nonlinear physical processes;
- quantum information technology;
- modeling of ordered and disordered systems;
- mathematical methods of modeling and designing of information security systems;
- security of information and communication systems.

Department of Mathematical Methods of Information Protection

- methods of mathematical analysis and synthesis cryptographic information changes;
- theory of reliability and risks;
- probabilistic methods in the combinatorial analysis;
- methods for differential analysis of block ciphers;
- standardization in the field of information security;
- models of cryptographic systems and methods of implementation of cryptographic mechanisms of information protection.

Department of Mathematical Methods of Information Protection

- radio technical devices and microwave systems;
- electronic and electroacoustic systems of technical protection of information;
- optimization of the design of technical protection of information systems.

5. INTERNATIONAL PROJECTS AND COLLABORATION

The department is actively working in the direction of academic mobility of students abroad ERASMUS+.

The department has established international links with research institutions of the Germany and Ireland.

Germany

- Jülich Research Centre

Ireland

- University College Dublin.
